

Profile

Flora is a Greek architect educated at the Technical University of Crete. Before moving to the UK in 2011, she collaborated with Greek practices where she was involved in both residential and community projects. She gained her RIBA part 3 qualification in 2015 whilst working at CODA Architects.

Flora worked for CODA Architects for four years on various healthcare projects before joining stretto architects in 2017.

Her interest in different artistic disciplines formulated her belief that architecture is part of a broader creative world and successful architecture lies within cross disciplinary relationships with other fields of art and design such as film, sculpture, painting etc.

She also has a keen interest in sustainable design and renewable resources and materials which reduce the impact on the environment and create a friendly and healthy environment for the people using these buildings.
